FDA Food Contact Compliance Statement:

Seeflex 040E

NOTE: This statement is made on the information provided to us by the material supplier and corresponds with our actual knowledge. BFM fitting uses the transparent, ether-based thermoplastic polyurethane alloy to manufacture our Seeflex 040E connectors, however, we cannot guarantee the suitability of the material for any given application and assume no liability in connection with the information provided below.

Seeflex 040E is a transparent, ether-based thermoplastic polyurethane alloy material which meets with the compositional requirements of the following FDA regulations for Indirect Food Additives: Polymers, intended to come into contact with food:

Section No:	Section Title:
FDA 21 CFR 177.1680	Polyurethane resins used as articles or components of articles intended to contact food.
FDA 21 CFR 177.2600	Rubber articles used as articles or components of articles intended to contact food.

This applies to all dry food and powder product.
